Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Mr. Grollitsch requested clarification of the role of Ames in the combination with Shin and raised the question of whether Ames is actually determining the average power from a plurality of points. Mr. Curs pointed out Ames col. 6 lines 37-40 which discloses sampling a digitized Vmon (digitized at col. 6 lines 1-17), which is representative of the average optical power, and then calculating the average optical power. Mr. Grollitsch also pointed out the claim limitation of sampling "at a frequency"; Mr. Curs explained that the language "at a frequency" in claim 1 did not necessarily tie that frequency to the protocol rate and explained that Ames's sampling is inherently at some frequency.
